WORK EXPERIENCE

Senior Full-Stack Software Engineer | Health Innovators | Cambridge, MA

Oct 2024 - Present

- Developed a **multilingual healthcare chatbot** using **React.js/Next.js** and **Vercel AI SDK**, enabling patients to query symptoms and medications via text and voice. Integrated **Retrieval-Augmented Generation (RAG)** with a medical knowledge base and implemented **FDA adverse drug reporting**. Improved accessibility across languages, with an expected 20% increase in query resolution rates and faster reporting of drug issues.

Senior Full-Stack Software Engineer | Awkns | Taipei, Taiwan

May 2024 - Apr 2025

- Built a real-time point redemption system for an event management platform using **React.js/Next.js** and **Firebase**, supporting QR code workflows and notification pipelines. Enabled 10,000+ monthly transactions with 99.9% uptime and full transparency across users, staff, and organizers.
- Developed a **Stripe-integrated** subscription landing page for a SaaS product, supporting free trials, upgrades, and cancellations. Configured **Webhooks** for automated billing status updates and enforced **3D Secure authentication**, reducing payment failures by **15%** and ensuring PCI compliance.
- Designed and deployed a high-demand ticketing system using **Next.js API Routes**, **Optimistic Locking**, and **SWR/SSE** for inventory sync. Integrated **NFT-based** ticket validation, eliminating fraud and improving booking efficiency by **25%**.

Senior Full-Stack Software Engineer - Remote | ECloudyValley | Taipei, Taiwan

Apr 2022 - Apr 2024

- Led the development of an enterprise-grade reporting system using **React.js**, **TypeScript** replacing manual uploads with dynamic, multi-dimensional visual reports. Integrated data from ERP and DWH APIs, and implemented role-based access control for department-specific views and approval workflows. Improved report delivery time by 70% and streamlined cross-functional decision-making.
- Improved runtime performance by 30% through a modular architecture leveraging **Zustand** for state management, code splitting, and lazy loading.
- Streamlined form logic using **React Hook Form** and **Zod**, reducing user input errors and enhancing validation UX across key billing modules.
- Developed and deployed **RESTful APIs** with **NestJS** and containerized services with **Docker** on **AWS**, boosting deployment efficiency and system stability in **CI/CD pipelines**.

Senior Frontend Engineer & Frontend Leader | Shinho | Shanghai, China

Dec 2015 - Mar 2022

- Digital Factory Management Platform for Enterprise Manufacturing Plants
 - Acted as Frontend Tech Lead in a digital transformation project for a multi-plant manufacturing enterprise. Integrated **IoT** sensor data and production line metrics into a unified dashboard and control platform, enabling real-time monitoring across multiple factories. This system improved data entry and visibility, reducing operational and data management costs by 20%.
 - Designed a **microfrontend architecture** using **React**, **Module Federation**, and **Nx Monorepo**, enabling modular deployment across independent factory sites. This significantly enhanced system scalability and maintainability.
 - Coordinated cross-functional integration of **WebSocket-based IoT APIs**, delivering real-time insights into temperature, humidity, machine status, and production KPIs, enhancing managerial decision-making and operational transparency.
- Mobile QR and Kiosk Ordering System for Restaurants
 - Designed and developed frontend architecture for a mobile QR code and self-service kiosk ordering platform. Focused on **responsive UI (RWD)** and **modular components** to deliver fast, intuitive user experiences across various devices, improving ordering speed and customer satisfaction.
 - Implemented real-time menu sync and order processing with **WebSocket** integration, ensuring seamless communication between front-end, POS systems, and kitchen displays. Optimized concurrency handling to support multi-user ordering, avoiding data conflicts and maintaining stability during peak hours.
 - Integrated **GA** with custom event tracking for behavior analysis and preference insights. Generated visual reports to guide menu and promotion strategies, resulting in a 20% increase in sales of top-performing items and enhanced revenue growth.
- Online Course Purchase and Offline Redemption System for a Dessert Workshop

- Built and optimized an end-to-end course purchasing flow using **React** and **Redux**, supporting complex interactive states. Modular architecture and performance tuning improved responsiveness by **30%**, enhancing user experience.
- Streamlined the cart and checkout process with better error handling, autofill, and flow simplification, reducing order error rates by 20% and increasing checkout success and user satisfaction.
- Leveraged **GA** to analyze conversion funnels and heatmaps, collaborating with the operations team to drive promotional efforts. Contributed to a 10% boost in course sales, increasing user retention and repeat purchases.
- **Corporate Brand Website and CMS Backend System**
 - Rebuilt a unified **Vue**-based brand website for a multi-brand group, focusing on SEO and cross-device consistency. Implemented **server-side rendering (SSR)** and **RWD**, as well as structured data integration, resulting in a 15% improvement in SEO.
 - Developed a Node.js CMS backend to streamline content operations. Built RESTful APIs integrated with a **MySQL** database, optimized for query performance. Employed caching and CDN deployment to reduce page load time by 20%.
- **Creative Scheduling and Visual Deployment System for Restaurant Chains**
 - Developed a dynamic visual scheduling platform using React.js, allowing centralized management and real-time updates across multiple stores. Integrated Node.js APIs and responsive UI to ensure consistency and high availability.
 - Led front-end development in collaboration with **ThoughtWorks**, adopting **Scrum** and MVP practices. Implemented **modular components** and **Docker**-based deployment, accelerating release cycles and improving system reliability to meet evolving business demands.

Frontend Creative Engineer | Yahoo | Taipei, Taiwan

May 2010 - Nov 2015

- Designed and developed cross-platform rich media ad products using **HTML5**, **JavaScript**, and **CSS/CSS3**, delivering 4+ new products annually. Improved compatibility and UX, driving 10% yearly revenue growth through increased client engagement.
- Developed a **Python**-based system to automate real-time ad performance tracking via **RESTful APIs**. Enabled **A/B testing** and dynamic content adjustment, boosting CTR by 15% and reducing feedback latency by 80%. Collaborated with marketing and frontend teams to improve campaign optimization and decision-making.
- Led the transition from Flash to modular **JavaScript + HTML5 + CSS3** ad components, supporting multiple formats and brand customization. Parameterized design enhanced reusability and maintainability, cutting development time by ~30% and improving engagement by 15%.

PROJECTS

Activo.quest | Personal Portfolio & AI Experimentation | San Jose, CA | 2024 - Present

- Developed a multilingual voice assistant with Next.js, Groq API, Llama3, and Cartesia TTS, integrating domain-specific knowledge bases for intelligent Q&A in English and Mandarin.
- Built a Deepgram-powered web app enabling real-time English and Mandarin speech transcription and voice commands, supporting multi-speaker dialogue recording with an intuitive interface.

SKILLS

- Languages: React.js, Next.js, Vue.js, TypeScript, Tailwind, Node.js, Nest.js, Python
- Database: MongoDB, MySQL, PostgreSQL, Firebase
- Tools: AWS, Docker, Vercel, Vercel AI SDK
- Certifications: AWS Solutions Architect, AWS DevOps Engineer, PMI PMP, ScrumMaster

EDUCATION

B.S. in Biology | Chinese Culture University, Taipei, Taiwan
